

## **Aqua-Guardian™ Installation**

---

**The surface grate over an Aqua-Guardian™ unit**

Installation is a simple process of removing the surface grate cover and lowering the Aqua-Guardian™ into the catch basin. Due to the lightweight nature of HDPE, the Aqua-Guardian™ units can be installed without the need for special lifting equipment. However, removal and handling of the storm grate cover may require lifting equipment due to its weight and size.

**The simple Aqua-Guardian™ installation without equipment**

The stainless steel support collar on the Aqua-Guardian™ is custom fitted to the inside the surface grate's frame. The flange on the stainless steel support collar will rest on the same rim that receives the surface grate cover. Once the insert is properly seated on the metal rim, replace the grate cover.
